CC (I) and (II) can be used in gene therapy and vaccine proteins (I) and (II) may be used in the prevention, diagnosis and treatment of diseases cassociated with inappropriate colon tumour associated protein (TCAP) CC expression, such as colonic cancer. For example, (I) and (II) may be used in the prevention, diagnosis and treatment of diseases castociated with inappropriate colon tumour associated protein (TCAP) CC expression, such as colonic cancer. For example, (I) and (II) may be considered to treat disorders associated with decreased expression by CC excitivity of TCAPs by expressing inactive proteins or to supplement the CC produce the TCAP proteins, by inscrting the nucleic acids into a host CC cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic CC complementary sequences may also be used as DNA probes in diagnostic CC quantitate the presence of similar nucleic acids in samples, and cc therefore which patients may be in need of restorative therapy. (I) may called a santigens in the production of antibodies against TCAPs cand in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies and antagonists may also be used to down regulate CC eag. by enzyme linked immunosorbant assay (EIISA). AAI28460 to AAI29512 and AAM24494 to AAM24523 represent nucleotide and amino acid sequences CC given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Align seg 1/1
                                                                                                           The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              410
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360

                                                                                                                                                                                                                                   The present sequence is one of a large number of 5' ESTs derived from CC mRNAs encoding secreted proteins. No ORF has yet been conclusively CC identified within the present sequence. The 5' ESTs were prepared from CC total human RNAs or polya+ RNAs derived from 30 different tissues. EST CC sequences usually correspond mainly to the 3' untranslated region (UTR) CC libraries. Such ESTs are not well suited for isolating cDNA sequences CC cNAs sequences have been obtained, the full 5' UTR is rarely included. CC 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be cused to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                alignment_block:

                       nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1371 uLeuSerAlaAlaGln 1376

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      31-DEC-1996 (first entry)
                    AAT28076-T28113, and AAT28131-T28173 represent novel senescent-related gene sequences isolated from fibroblasts using the method of the invention. In the method of the invention, mRNA is isolated from a senescent cell, and a young gulescent cell, and the mRNAs are amplified (using primers such as those shown in AAT28044-T28075) in separate reaction mixtures. The amplified sequences are then separated by size or charge, and the products are analysed to identify a gene from young quiescent cells and dividing cells, that is present at a different level from senescent cells. To enhance the method even more, it can be
                                                                                                                                                                                                                                       Identifying, isolating and regulating senescence-related genes useful to ameliorate problems associated with accumulation of senescent cells, e.g. age-related lipofuscin accumulation in the retina and AIDS
                                                                                                                                                                                                                                                                                                                                  WPI; 1996-251464/25

The method can be used for the rapid and efficient identification and isolation of senescence-related genes and gene products, and to detect and distinguish between senescent and non-senescent cells. It can also be used to destroy cells expressing senescence specific (or related) gene products, and to screen for compounds capable of altering gene expression in senescent cells. The method can also be used to ameliorate problems associated with the accumulation of senescent cells such as age-related lipofuscin accumulation in the retina, and in the treatment of AIDS. Also, the method can be used to distinguish young cells from senescent cells in donor tissue, which is useful in removing senescent melanocytes overexpressing melanin which cause hypopigmentation, or liver spots.

The sESTs can be used for gene therapy and in vaccines. The sESTs are useful as probes for the content of the sests are useful as probes for the confecules which correspond to the sESTs. Proteins encoded by the sESTs are useful in assays for determining blological activity and raising cantibodies. They may be useful for treatment of autoimume disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, costeoparthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation conditation contrasts. Nature, bacterial, fingal or viral infections, coagulation constrasts. AAAA3420 to AAAA3425 represent linker variants which are given to the exemplification of the present invention.

The sESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; inmunomodulatory; haematopoletic; chemokinetic; analgesic; haemostatic; thrombolytic; antiinflammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antisathmatic; vulnerary; antilucy; osteopathic; neuroprotective;

CC The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of CC oligonucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprises a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC complementary strand of a polynucleotide which comprises a 5'-end CC complementary to a combination of CC complementary to comprise a 3'-end sequence complementary to a CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC conformal comprises a 1 least 15 nucleotides and the combination of CC the 5'-end sequence3'-end sequence is selected from those defined in GC comprises a 1 least 15 nucleotides and the combination of CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CDNAs easily without any specialised methods. AAH3316 to AAH3363 to AAH33633 to AAH313639 to AAH33639 to AAH33639 to AAH33639 to AAH33630 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                cc of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end cc sequence and an oligonucleotide comprising a sequence complementary to a cc polynucleotide which comprises a 3'-end sequence, where the combination of cc the 5'-end sequence/3'-end sequence is selected from those defined in cc the specification. The primer sets can be used in antisense therapy and cc in gene therapy. The primers are useful for synthesising polynucleotides, cc particularly full-length cDNAs. The primers are also useful for the cetection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH33165 to AAH13628 and calling and complement thuman amino acid sequences; and AAH31629 to AAH31632 crepresent oligonucleotides, all of which are used in the exemplification considered to consider the complementary to the complementary to consider the complementary to the complementary to the complementary to complementary to a complement

EXPRESSED sequence to the sequence to th sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haemastopoiesis regulating activity, tissue growth activity, haemostatic activity, haemostatic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue

The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated P, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the

                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Inhibin activity, chemotactic/chemokinetic activity, hemoostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              perioheral nervous system; neuropathy; Central nervous system; neuropathy; Central nervous system; had alsease; Huntington's disease; had alsease; h
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQ ID NO 1410; 10078pp; English.

CC acids which are expressed in hindgut and Malpighian tubule (HMT) tissue CC or head and nerve cord (HNC) tissue. The invention also relates to the CC encoded proteins. The invention additionally encompasses expression according to recombinant viruses and recombinant cells comprising the nucleic acids of the invention, recombinant production of the proteins. CC antibodies against the proteins, a method of identifying inhibitors of the proteins, and compositions comprising the inhibitors for CC administration to an animal. The nucleic acids, and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with flea infestations. For example, the nucleic acids may be used to produce an HMT or HNC protein according to standard recombinant CC DNA methodology by inserting the nucleic acids into a host cell and CC culturing the cell to express the protein and HNC nucleic acids may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat flea or other homologous nucleic acid sequences in samples. They may also be used to study the expression and CC antipodies, and in assays to identify modulators (agonists and EC cantinodies, and in assays to identify modulators (agonists and activity. The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1020 IleLeuThrLeuGlnLysAspLeuLys 1028
                                                                                   The present sequence encodes an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   detection; attenuation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enterococcus faecalis EF040 gene fragment.

                                                                                                                                                                                                                                                                                                          The present sequence represents a gene isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated Enterococcus faecalis polynucleotides - used products for the detection of Enterococcus and for use in for prevention or attenuation of Enterococcus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 118-119;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (HUMA-) HUMAN GENOME SCI INC

This partial nucleic acid sequence (lacking the 5' end) encodes an elf protein (see AAW81642) of the foetal murine liver. The inventic provides early developing liver proteins (see AAW81638-42) and the genes coding for them (see AAV6410-24). To isolate the genes, embryonic liver cDNA libraries were constructed at days 10.0, 11.5, 12.5 and 14.5 post coitus. These were screened with probes derived from growth factors (IGF-I, IGF-II and IGFBP-2) and transcriptional activators (C/EBP and LFB1) known to be expressed in the developing liver. Subtractive hybridisation was subsequently performed, and isolated clones were analysed for stage specificity by Southern
                                                                                                                                                                                                New isolated early liver development genes - used to develop products for treating, e.g. liver disease, hepatocellular cadegenerative neurological disorders, anaemia, ataxia or

The el proteins are probably important for the formation of the biliary tree during early liver development. They are used in a claimed method to treat cholestasis, billary stones, liver obstruction, stricture, primary billary cirrhosis and primary sclerosing cholangitis. Early developing liver proteins and nucleic acids can also be used in the diagnosis of liver diseases and other disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse elf-2 cDNA
             murine liver. The invention provides early developing liver proteins (see AAW81638-42) and the genes coding for them (see AAV64410-24). To isolate the genes, embryonic liver cDNA libraries were constructed at days 10.0, 11.5, 12.5 and 14.5 post coitus. These were screened with probes derived from growth factors (IGF-I,
                                                                                                                                                                    New isolated early liver development genes - used to develop products for treating, e.g. liver disease, hepatocellular ca degenerative neurological disorders, anaemia, ataxia or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          known to be expressed in the developing liver. Subtractive hybridisation was subsequently performed, and isolated clones were analysed for stage specificity by Southern blotting, sequence, transcript size, abundance and tissue distribution. 3 Elf genes (see AAV64411-13) were identified. The elf proteins (see AAW81639-40) are probably important for the formation of the biliary tree during early liver development. They are used in a claimed method to treat cholestasis, biliary stones, liver obstruction, stricture, primary biliary cirrhosis and primary sclerosing cholangitis. Early developing liver proteins and nucleic acids can also be used in the diagnosis of liver diseases and other disorders, including those relating to oncogenesis and tissue repair.

Interacts with a glutamate transporter protein and has an CC expression pattern in the brain. The GTRAP proteins are also involved in mediating chloride transport and cytoskeletal stability. The CC invention also provides methods for identifying a compound that CC empound that inhibits the interaction of a glutamate transporter compound that inhibits the interaction of a glutamate transporter compound which modulates the activity of a glutamate transporter associated polypeptide or interaction with CC associated with glutamate transport or compound that inhibits transport or compound that could be an activity of a glutamate transporter associated polypeptide or interaction with CC associated with glutamate transport or chloride flux, preferably a CC nervous system disorder such as neurodegeneration, spinocereballar CC ataxia type 1 (SCA1), schizophrenia, epilepsy or a disorder of GABA CC metabolism. Such compound could be an antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Align seg 1/1 to: AAS04273

Charles invention relates to a method for modulating intracellular to the invention of a selected integral membrane or secretory protein into a consist ration of a selected integral membrane or secretory protein into a consist ration of a selected integral membrane or secretory protein into a consist relative to the cis-Golgi to the medial-Golgi to the medial-Golgi apparatus, or from the endoplasmic reticulum to the cis-Golgi apparatus or from the grant consistency to the medial-Golgi apparatus or from the spectrin-ankyrin-adapter protein trafficking/tethering system (SAATS). Compounds that inhibit or enhance intracellular sequestration of selected integral membrane or secretory protein into a transport vehicle are consistent in the amount of the particular protein. Identification, of ce.g. the binding domain for CFTR (cystic fibrosis transmembrane conductance regulator) responsible for cystic fibrosis, in the conductance regulator) responsible for cystic fibrosis, in the conductance regulator) responsible for cystic fibrosis, in the conductance regulator) responsible for cystic fibrosis. The method conductance regulator protein trafficking/tethering system (SAATS), by the methods would allow early analysis of possible transport enhancing conductance that might the clinical severity of this disease. The method construction of RNA is not required and the method lends itself to high-throughput in vitro screening assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Align seg 1/1 to: AAX36583

The invention provides early co of the foetal murine liver. The invention provides early co developing liver proteins (see AAW81638-42) and the genes coding for them (see AAV64410-24). To isolate the genes, embryonic liver cDNA cc libraries were constructed at days 10.0, 11.5, 12.5 and 14.5 post ccottus. These were screened with probes derived from growth cc cottus. These were screened with probes derived from growth cc factors (IGF-1, IGF-1 and IGFBP-2) and transcriptional activators (C/EBP and LFB1) known to be expressed in the developing liver. Cc subtractive hybridisation was subsequently performed, and isolated cc clones were analysed for stage specificity by Southern blotting, CC sequence, transcript size, abundance and tissue distribution. 3 Elf genes (see AAV64411-13) were identified. The elf proteins are probably important for the formation of the biliary tree during cerly liver development. They are used in a claimed method to treat cholestasis, biliary stones, liver obstruction, stricture, CC primary biliary cirrhosis and primary sclerosing cholangitis. C Early developing liver diseases and other disorders, including the correction and the received also be used to the diagnosis of liver diseases and other disorders, including

AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for
                                                                                                                                                                                                                                                                                                                                                                                      7492 TTGATTGATCGGGGTGCCGATATTAAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for the process of prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Barash SC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-MAY-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 986-1002; 2084pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 228 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel single exon nucleic acid probe used to measuring gene expression a human breast -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                     ubiquitin hydrolase substrate; human (H2) relaxin fusion gene; ds.
                                                                                                                                                                                                                                                                                                                Encodes ubiquitin-relaxin fusion protein.
                                                                                                                                                                                                                                                                                                                                                                 16-JUN-1993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form specification, but was obtained in electronic format at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   308 CTGAGGGAGAAGAAGAGGAATCG

                                                                                                                                                                                                                                                                                                                                                                           Align seg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This XbaI-HindIII fragment codes for a fusion of human (H2) relaxin B-chain (32 amino acids; the N-terminal amino acid of relaxin B-chain is missing) to ubiquitin via 6 linking amino acids. The fusion protein was expressed by E.coli transformed with the fusion gene. Inclusion of 35S-labelled Cys in the translation medium resulted in a radiolabelled fusion protein suitable for use in assays to investigate cleavage by ubiquitin hydrolase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides encoding human secreted proteins - due.g. human blood, kidney, foetal lung, placenta, testes, ovary, pituitary, retina and colon cDNA libraries

                                                                                                                                                                                                                                                                                                                                                                   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; CC immunostimulant; cardiant; thrombolyfic; coagulant; vasotropic; cardidabetic; hypotensive; dermatological; immunosuppressive; CC antidabetic; hypotensive; dermatological; immunosuppressive; antiphrodiy; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating cc pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, CC proliferative disorders, neurodegenerative disorders, osteoarthritis, CC proliferative disorders, neurodegenerative disorders, osteoarthritis, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, CC coagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                                                                                                    The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotides and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polynucleotides, polypeptides and antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,

                                                                                                                                                                                                                                                                                         The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-JUN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-AUG-2001.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-FEB-2000;

CC acids which are expressed in hindgut and Malpighian tubule (HMT) tissue. CC archeology by the invention ally encompasses expression are expressed in hindgut and malpighian tubule (HMT) tissue. The invention also relates to the cor head and nerve cord (HNC) tissue. The invention also relates to the cor rhead and nerve cord (HNC) tissue. The invention also relates to the cor rhead and nerve combinant production also relates to the constructs, recombinant viruses and recombinant cells comprising the nucleic acids of the proteins, a method of identifying inhibitors of the proteins, and composition, recombinant production of the proteins of the proteins, a method of identifying inhibitors of the proteins, and compositions comprising the inhibitors for administration to an animal. The nucleic acids, and the proteins they cannot be used in the prevention, treatment and diagnosis of diseases associated with flea infestations. For example, the nucleic acids may be used to produce an HMT or HNC protein according to standard recombinant custom the cell to express the protein according to standard recombinant custom the cell to express the protein according to standard recombinant custom the cell to express the protein according to standard recombinant custom quantitate the presence of cat fleas or other homologous nucleic acids and quantitate the presence of cat fleas or other homologous nucleic acid sequences in samples. They may also be used to study the expression and continuous to the proteins and their role in metabolism. The HMT and HNC contains and their role in metabolism. The HMT and HNC cat antagonists and antibodies and antagonists and activity. The antibodies may also be used to downregulate protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The proteins according to the protein assay (ELISA).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   403

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63322 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, epptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides particularly full-length cDNNs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAH365893 represent human amino acid sequences; and AAH13632 to AAH13632 and AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC cDNAs easily without any specialised methods. AAH33162 to AAH3363 to AAH3742 represent human cDNA sequences; AAB92446 to CC AAB95893 represent human amino acid sequences; and AAH3362 to AAH33632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of a comprise of the compression of the compression of the complex to the compression of the complex to the compression of the complex to 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary of a nolvnucleotide which comprises one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID 3080; 2537pp +
